

# FL NavFleet

## Total ship operations platform

NavFleet creates a modern, digital ecosystem that allows collaboration by multiple stakeholders and helps improve the efficiency of operations and fleet performance.

– Reduce costs, enhance safety and minimise emissions.

# **FL NavFleet**

## All the tools you need, at your fingertips

### What is NavFleet?

Improve fleet performance from one digital platform

NavFleet sets a new standard for fleet management and performance focused decision-making. By integrating multiple streams of data - from vessels, shore-based facilities and business-critical sources - onto a single platform, shipping companies are empowered to monitor, refine and improve fleet-wide performance in an instant.

NavFleet has been developed in collaboration with shipping companies to deliver a one-stop-shop solution to many challenges. The system presents relevant insights and solutions in a simple way, thus increasing transparency and improving confidence in decision-making.

Now, you can improve planning, execution and compliance (EU MRV / IMO DCS) in one place!

Easy and smart!

### What does it mean for you?

With Navfleet, you can:

- Improve vessel performance
- Enable better decision-making
- Enhance situational awareness
- Simplify workflows and save time
- Increase safety
- Reduce fuel consumption and emissions
- Ease the burden of regulatory compliance
- Integrate with other business-critical sources
- Save money

# Improve fleet intelligence and performance

– one integrated solution for **planning, execution and compliance**

## Regulatory Compliance

EU MRV / IMO DCS ready reports and EEOI, AER, CII, CO2 analytics ensures compliance and supports sustainability initiatives.

## Improved Planning

Voyage simulations, integrated passage plans and weather routing ensures safe, efficient and profitable voyages.

## Better Data Quality

Dual-layer validation approach ensures better data from which to make decisions; data quality KPIs ensure continuous improvement.

## Stronger Execution

Advanced fleet analytics and monitoring capabilities improve voyage execution, CP performance and machinery utilization. Real-time alerts support timely action.

## Flexible Integrations

Ability to integrate with 3rd-party software and hardware systems centralizes data, increases transparency and simplifies workflows.

## Holistic Decision-Support

Holistic approach helps optimize vessel performance by reducing energy demand from vessels, thus minimizing emissions and reducing costs.

# Focus on flexibility

Our modular approach makes it easy to configure your ideal solution

## NavFleet

NavFleet allows you to track vessels at high resolution, alongside access to essential data layers and simplified weather information. By extending your performance tools, it monitors passages against off-track limits, operational limits, schedule, and charter party requirements, with weather forecasts and overlays.

For voyage optimization, you can access an IMO DCS / EU MRV compliant reporting platform with dual-layer validations by integrating add-on functionalities. Analytics for crews and shore-side teams help drive better data quality and insights to improve optimization decisions. Add high-impact modules to improve hull performance, engine performance, CP compliance and other leading KPIs.

In addition, we can offer you the benefit of our white glove performance service! Our system – and the team of performance specialists – reduce the need for constant monitoring and analytics; we bring the diagnosis to you and help drive towards cost-saving solutions.

# Easy to integrate

Centralise data collection and increase transparency with our flexible integration options.

# Expert driven

An experienced team of performance specialists help improve the data quality and performance of your fleet.

# One integrated solution for sustainable shipping

NavFleet fits perfectly within the broader NAVTOR ecosystem. By integrating NavFleet with NavBox and NavStation, users have everything they need to improve fleet efficiency and simplify daily workflows.

All planning, monitoring, execution and compliance needs are available in our total ship operations platform.

## NAVATOR Suite
