Environmental Regulations

Complete compliance

With environmental regulations increasing in stringency and complexity, access to the correct data at the right time protects you from paying the price of non-compliance.

Responsible, compliant, and environmentally friendly shipping has never been more important. For society, for the world and business well-being. With NAVTOR's Environmental Regulations module, the latest environmental data is layered on top of ENC's, giving you and your vessels a complete overview of what regulations apply when and where.

- International regulations (MARPOL)
- National regulations
- Regional regulations
- Port regulations

Access to the most detailed environmental regulations

The Environmental Regulations module is a part of the navigational route planning tool NavStation®. The module gives easy access to environmental data - all the way down to port level. Implementing as a layer on top of the ENC, the navigator can quickly identify all regulations and rules for every single point of the entire route. This is a crucial resource, giving complete control of the environmental laws and helping crews schedule, for example, vessel discharges at safe and timely locations.

SAVE TIME AND COSTS

NavStation includes access to an array of digital navigational information incorporated additionally as overlays on top of the official ENC charts. With databases and permits automatically distributed and updated seamlessly through our cyber-secure NavBox, NAVTOR continually ensures vessels have the data they need to keep them safe, compliant and always up to date.
