Visualize the process

![Proceed Cloud logo] **Proceed Cloud**

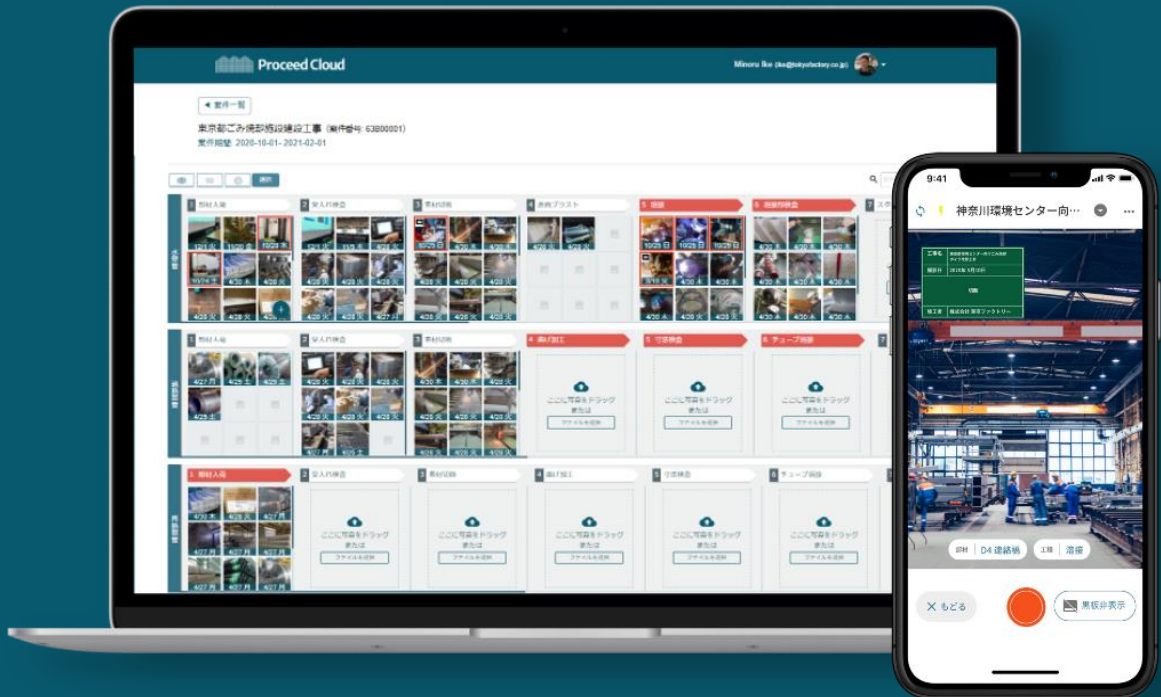

Proceed Cloud is a digital tool for sharing manufacturing information and it create database based on process photos
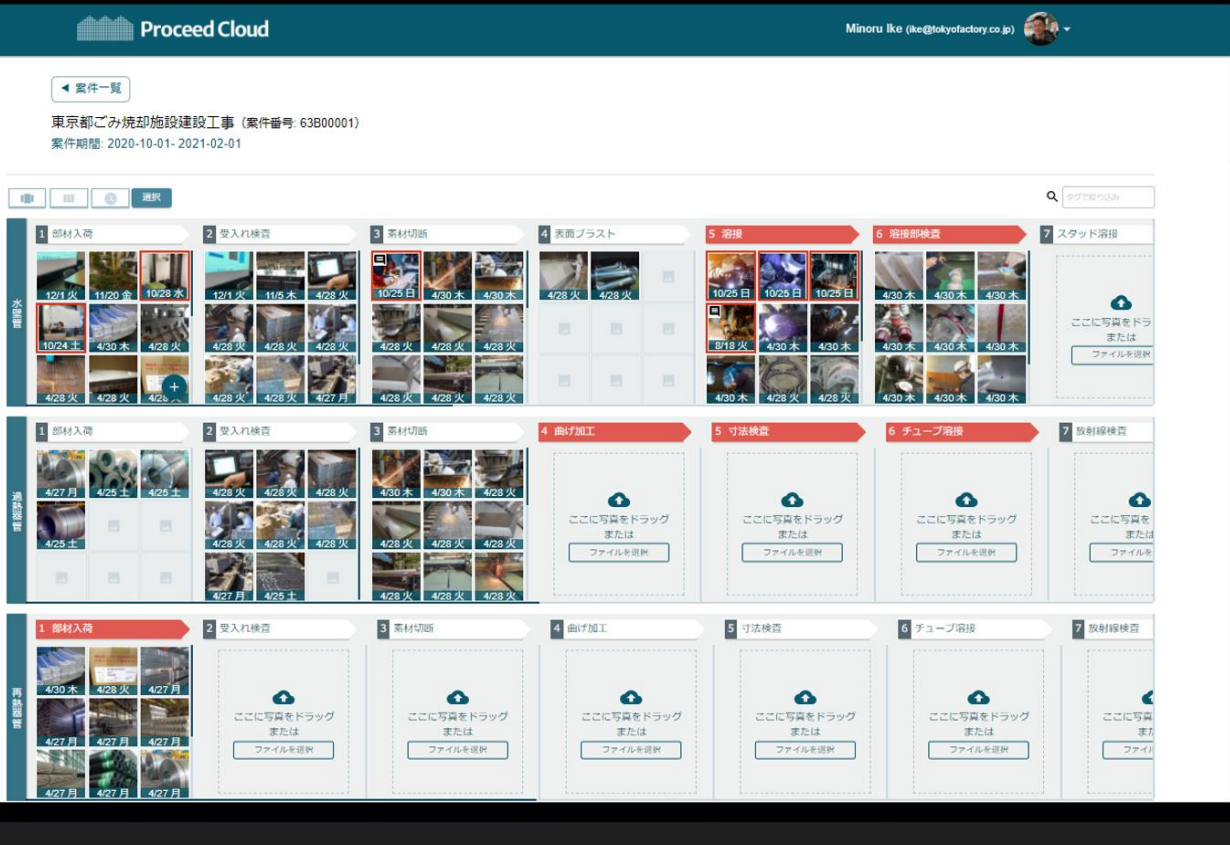

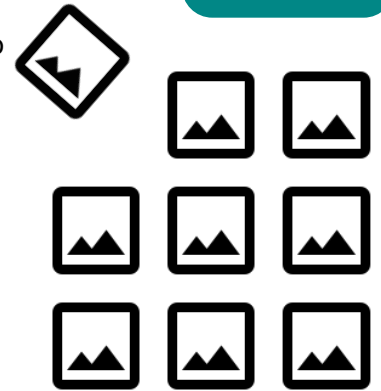

Main Functions

Easily organize and share process photos

Project officials on how to store photos that had previously belonged to the genus. Unification among all employees enables the sharing of manufacturing information based on photographs
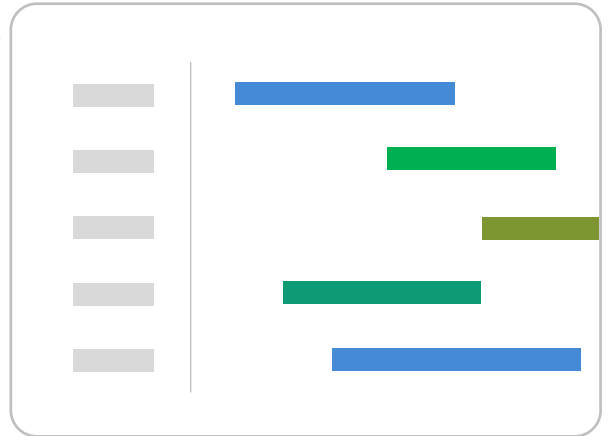

✓ Take a photo with your smartphone, you can select "Component" and "Process" on the spot and upload the photo. Organize photos in two axes without any operation on a PC.

✓ Also, tagging and searching photos improves photo searchability.

✓ Video PDF and TIFF files can also save

Process control functions enable achieve remote process control

By registering processes on the Proceed Cloud and managing progress, you will be able to track the progress of your processes without having to go to the site. This reduces the risk of delivery delays, and at the same time reduces unnecessary business trips and SV dispatches.
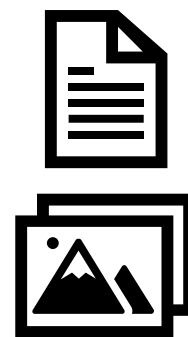

Write and comment functions enables knowledge accumulation

By communicating work precautions and problem solving on Proceed Cloud, which were previously communicated orally or by e-mail, we can naturally build a database on manufacturing technology.

Streamlining reporting tasks

Streamlining the photo album creation process. You can create a photo album with a simple click.

Advantages

Photo-based
reliable communication

Throughout share
the supply chain information

Construct manufacturing
information DB

→

Encourage skills transfer

Improved operational efficiency

Reduce project QCD risks

Used in **15** countries worldwide
