

SMARTLINK

Data Integration Platform

Accelerate the logistics digital transformation with SmartLink

Streamline the data integration process by connecting trading partners, workflow automation, and business intelligence.

Data Integration Platform

SmartLink, an integrated platform as a service (iPaaS), is specialized in logistics data integration, real-time shipment track & trace, and global customs filing service.

We integrate all of the customer's business data on the cloud, on-premises, or in hybrid deployments so that the logistics company can engage with customers and partners across digital channels.

SmartLink also provides a customs filing application that empowers logistics companies to confidently prepare and complete customs declarations in a timely manner supported by advanced automation and research capabilities.

In addition to the data integration and customs filing service, SmartLink provides the event-driven notification service of real-time shipment tracking and being aware of delivery processes at the precise time of shipment activities occurrence.

CyberLogitec

SMARTLINK

Data Integration Platform

Experience Positive Outcomes

Data Integration

Streamline the data integration process by connecting trading partners, workflow automation, and business intelligence.

Customs Filing Service

Innovate the cloud-based self-filing software for easily completing your customs responsibilities.

Track & Trace Shipment

Provide logistics players with up-to-the-moment updates on the location and status of the shipments through our web interface.

Document Automation

Reduce the unstructured data processing time with our Document Auto-Extraction Engine.

Main Functions

Pre-built Connectors

Connect to the Data Source with our Pre-built Standard Adaptors (EDI, Database, real-time APIs, and file-based formats)

Easy-to-use User Interface

Use advanced multi-step workflows to pass data from one to the other in Drag & Drop interface

Document Auto Processing Tool

Support for special file format transformation (PDF, Image, Excel, etc.)

Ready-to-use Templates

Transform data into any format with hundreds of ready-to-use templates, using little to no code

Development Analytic Tool

Reduce costs and development time associated with logistics data integration

Fully Managed Service

Help customers keep their systems running smoothly with our data integration experts
