Optimum sensor life is achieved at an average temperature at the measuring element of 200 - 250 °C.

The life expectancy of the sensor has been designed so that the lifetime of 16.000 h or more can be achieved in a gas engine, at 1500 rpm.

Mounting

The sensor should be installed close to the combustion chamber, the length of the pressure bore between sensor and combustion chamber depends mainly on engine speed.

Generally there are two possibilities for the installation position of cylinder pressure sensors:

Head mounted or set-back mounted.

Head mounted installation near to combustion chamber

Connector

A = Power supply 18...32 V

B = Pressure signal output 4...20 mA

D = Signal zero point / Power GND

C = Programming pin, only used for calibration
